

Software Development Engineer with hands-on experience designing, developing, and deploying production-grade web and mobile applications. Strong experience with JavaScript, React, React Native, Node.js, and cloud platforms including AWS and Firebase. Proven ability to build scalable systems, RESTful APIs, and data-driven applications with a focus on performance optimization, clean architecture, and reliability. Strong foundation in data structures, algorithms, object-oriented programming, and software development lifecycle (SDLC).

Work experience

Accenture | Associate Software Engineer

Maharashtra, India | 02.2024 - 08-2024

- Developed and maintained production web and mobile applications using React and React Native in an Agile/Scrum environment.
- Designed and integrated RESTful APIs using Node.js, improving data flow and frontend-backend communication.
- Optimized application performance through component refactoring and efficient state management, achieving ~20% performance improvement.
- Improved code quality and maintainability by implementing best practices, modular architecture, and reusable components, reducing defects by ~15%.
- Collaborated with cross-functional teams including QA and product managers to deliver scalable software solutions.

Education

Purdue University NorthWest - Master's in Computer Science
GPA: 3.23/4

Indiana | 08.2024 - Current

Kakatiya Institute Of Technology & Science - Bachelor's Degree
GPA 8.56/10

India | 06.2019 - 06.2023

Skills

Programming Languages: JavaScript, TypeScript, Java, Kotlin

Frontend Technologies: React.js, React Native, HTML5, CSS3

Backend Technologies: Node.js, Express.js, RESTful APIs

Databases: MongoDB, MySQL, DynamoDB

Cloud & Tools: AWS, Firebase, CI/CD, Vercel, Git, GitHub, Postman, Docker

Core Concepts: Data Structures, Algorithms, Object-Oriented Programming (OOP), System Design Fundamentals, Client-Server Architecture

Projects

Fudoo - Production Mobile Application

Jun, 2023 - Aug, 2024

- Designed and developed a production-grade React Native mobile application for campus food ordering, supporting high transaction volumes.
- Designed backend data models and API contracts following REST principles, applying system design fundamentals for scalability and reliability.
- Implemented real-time order tracking and dynamic inventory management, reducing queue times by ~50%.
- Integrated secure payment processing and optimized cloud infrastructure for scalability and reliability.

Feedback Flow - Full-stack SaaS platform

Sep, 2024 - Present

- A full-stack SaaS platform using React, Node.js, Express, and MongoDB, allowing users to collect, manage, and display feedback from websites through an easy-to-embed widget.
- Developed customizable templates and dashboards for users to view real-time feedback, track responses, and embed testimonials seamlessly on landing pages.
- Implemented secure user authentication, data management, and responsive UI, ensuring a smooth and personalized experience for both users and their website visitors.

ShortLnk - URL shortener with analytics

Aug, 2024 - Sep, 2024

- This is a full-stack URL shortening platform using React, Vite, Node.js, Express, and MongoDB, enabling users to create, manage, and track shortened links.
- Wrote basic unit and integration tests to validate core application workflows.
- Implemented real-time analytics for each link, including clicks, device type, and referral sources, along with a responsive dashboard for easy link management.
- Built a secure authentication system and optimized performance with modern frontend and backend practices, ensuring a fast, user-friendly experience.

Training

Mern Stack Internship

Accenture | 03.2024 – 04.2024

Google Supported Virtual Internship

Google | 08.2022 – 09.2022

Database Programming with SQL

Oracle Academy | 03.2021 – 04.2021

Interests

Building scalable software systems, backend architecture, system design.
